# ITMD 562-Assignment 2

Name: Sanjyoti Patil

CWID: A20332642

USER Interface:

This assignment is to build a blogging platform which will cover use of forms in website application, basic security for form processing and server applications.

1) When user executes index.php page will be displayed, which is Bloggers website. Enter your name and continue (Note: User needs to submit only name no password verification is required. This is just to display purpose.)
2) After continue admin.php will get displayed. This is page where user can write his blog. Blog consists of blog title and status. Uploading image is optional. You can view five blog entries and can get details of it it.
Page will maintain count for number of times user is visiting the page. User can also rest the count.
3) Common header and footer maintained for blogger site.

Navigation flow:

Folder Structure

src

- css
- img
- common
- admin
- index.php

Testing

1) The pages has been developed and tested on my local machine Windows 7, 64 bit running Apache 2.4.9 with PHP 5.5.12
2) Browser Chrome 37.0
3) My Laptop resolution 1366*768

Future Enhancement

1) By using more prominent css and images this pages can be made more attractive.
2) We can add more complex structure for pages by using php.
